**Salesforce**  
San Francisco, CA

October 14, 2017

Hello,

I am a junior in Computer Science at the University of Michigan, and I am highly interested in working at Salesforce next summer.

I would be a great asset for the team at Salesforce, because I have strong Java programming skills obtained through extensive usage in my education, several personal and academic research projects, and reading and practicing all concepts in Joshua Bloch's Effective Java. I also have work experience in a developer position, where I developed applications using MVC design pattern and designed multiple relational database schemas. More generally, I am also a very hardworking individual with excellent problem-solving and communication skills.

Salesforce's place in the industry and its continued growth with new projects like Einstein Forecasting are very exciting, and I would love to be a part of the team. Please review my resume for any additional details regarding my experience and relevant skills. I look forward to hearing from you.

Thank you,

**Paul Gossman**
