Okta

October 14, 2017

Hello,

I am a junior in Computer Science at the University of Michigan, and I am highly interested in working at Okta next summer.

I would be a great asset for the team at Okta for many reasons. I have previous work experience building production applications using MVC web frameworks and designing relational database schemas. I also have a strong Java background from my education and several projects which include CLI tools, web applications with Java Servlets, and Android development. Before going into computer science, I also studied computer networking and network security in my completion of an associate's degree.

Please review my resume for any additional details regarding my experience and relevant skills. I look forward to hearing from you.

Thank you,

Paul Gossman
